Blood Management System— *Detail*

The main aim of developing this system is to provide blood to people who require blood. The number of persons who require blood is increasing in large number day by day. Using this system, users can search blood groups available in the city and get the contact number of the donors with the same blood group they need. To help people who require blood, this Online Blood Bank management system can be used effectively for getting the details of available blood groups and users can also get the contact number of the blood donors having the same blood group and within the same city. If the blood group is not available in the blood bank, the user can request the donor to donate the blood to him and save someone's life.
